

Home Eye Safety

Do you need Safety Glasses at home?

Eye injuries account for nearly two and one half million accidents in the United States each year. What's more, even as the rate of eye injuries in the workplace drops, the number of such injuries occurring at home is on the rise. In fact, a surprising forty-four percent of all eye injuries take place at home. While the majority of injuries happen to males (73%), both sexes and all age groups are at risk.

What may be more alarming is the way these injuries occur. Trimming the bushes, operating power tools, and cleaning with household chemicals all pose critical eye dangers.

Fortunately, about ninety percent of all eye injuries can be prevented with the use of proper protective eyewear. Safety eyewear is as attractive and comfortable as regular dress eyewear.

Frames are available in both plastic and metal materials, and contain the same flex hinges and soft nose pads that have made everyday frames more popular.

Styles and colors are also available in a wide range of sizes to satisfy the fitting needs of men, women and teens. And safety frames offer the added protection of sideshields that can be slipped on or permanently attached.

Ask your eyecare professional about the complete collection of contemporary safety frames from Uvex Rx.
